Do you have a wound that will not heal?

Have you been told that you have severe peripheral arterial disease (PAD) or critical limb ischemia (CLI)?

Have you been told that surgery is no longer an option?

The CAMC Clinical Trials Center is now conducting a study to measure the effectiveness of an investigational product for CLI in people with no options.

About the study:

- Participants must be between 35 and 90 years of age
- Study-related procedures and evaluations are provided at no cost to participants
- Reimbursement for time and transportation support may also be provided

Visits will take place in the CAMC Vascular Center of Excellence. To learn more, contact Kristi Sutphin, study coordinator, at (304) 388-9945.
